Good to hear from you, Walt. It will certainly be interesting here for a few years. I might have to implement my extraction plan soon, and go do something else. That approach is sounding better and better to me.

If you take a look at the EPA website, we've been saying that we will have a status report – not a final report - by the end of the year. That is still the plan, and the party line. We knew that it would be an impossible task to be finished with the study so quickly, given that this is a multi-agency effort, and due to all of the internal reviews and approvals that were needed. That is still the case. Beyond that, we aren't saying much right now. Our efforts are focused on meeting that goal.

Hope this helps.

Jackie

Hey Jackie,

Hope you have recovered from the aftermath of the election.

Who knows what Trump has in store for the EPA. Probably nothing like what Hillary would provide.

I have a meeting with the Synthetic Turf Council later this month and would like to update the STC about the multi-agency study that is supposed to be complete by the end of this year.

Could you please give me an update from EPA's perspective?

Thanks.

Walt
